Summary

Software Engineer with 2+ years building backend systems and cloud deployed services using Python, Docker, and AWS. Experience automating backend workflows and deploying scalable APIs with interest in DevOps and infrastructure automation

Education

University of Massachusetts, Amherst, MA, United States

Sep 2024 – May 2026

Master of Science in Computer Science

GPA: 3.86/4.00

University of Mumbai, Mumbai, India

Aug 2019 – May 2023

Bachelor of Engineering in Computer Engineering

GPA: 3.87/4.00

Professional Experience

Software Engineer (Contract) | Karpuragaurai Technologies, India (Remote)

May 2025 – Aug 2025

Tech Stack: Python, Redis, REST APIs, AWS, Docker, Celery

- Implemented semantic retrieval using PostgreSQL and PGVector to index client knowledge bases for grounded LLM responses
- Deployed containerized backend services on AWS ECS behind an Application Load Balancer with autoscaling workers

Founding Full Stack Software Developer | Lab Systems (I) Pvt. Ltd., India

Aug 2023 – Aug 2024

Tech Stack: NextJS, Python, C++, Flask, SQL/NoSQL, Cloudflare, Docker, Software Architecture, Solution Designing, AWS

- Built core platform features for an AI-driven digital forensics product supporting investigative workflows for clients.
- Developed Python backend services integrating MongoDB and Elasticsearch to power search and analytics workloads.
- Built scalable enterprise-grade UIs in NextJs and 20+ REST APIs supporting large-scale data queries for enterprise clients at scale
- Containerized backend services on Linux with Docker and deployed to the cloud for production stability and release consistency
- Architected AI-driven forensic agents to automate evidence analysis, anomaly detection, and investigation workflows
- Led an engineering team and established Git-based workflows, code reviews, and release practices to maintain delivery velocity

Full Stack Software Developer Intern | Lab Systems (I) Pvt. Ltd., India

Aug 2022 – Jul 2023

Tech Stack: Python, Node.js, REST APIs, MongoDB, LevelDB, Docker, Linux, Web Security, Distributed Systems, System Design

- Developed a solution for cryptocurrency forensics applications, reducing manual analytical processing time by 70%
- Implemented unit tests and validation checks to ensure correctness and reliability of backend system changes over time
- Designed hybrid MongoDB–LevelDB storage patterns enabling fast lookups across 2 Billion transaction records
- Contributed to casework involving global clients with financial exposure exceeding \$20M in sensitive environments

Skills

Cloud & Infrastructure: AWS (ECS, EC2, ALB), Docker, Cloudflare, CI/CD pipelines

Backend: Python, Node.js, REST API design, PostgreSQL, MongoDB, Redis, caching

AI & Automation: LLM integration in production systems, RAG pipelines, embeddings, vector databases (PGVector)

Frontend: React, TypeScript, Next.js, Tailwind CSS

Engineering Practices: Full-stack system design, testing (PyTest, Mocha)

Relevant Projects

LLM-Router: Intelligent LLM Selection and Cost Optimization | Tech: PyTorch, DistilBERT, CodeBERT [Project Link](#)

- Fine tuned DistilBERT and CodeBERT classifiers on real world prompt response data to dynamically route requests.
- Reduced inference costs by 70% by reducing reliance on expensive models like GPT-4o while maintaining high output quality
- Added guardrails and fallback paths within the LLM routing logic to ensure predictable responses under edge-case inputs

Patent

D Ein Blockchain-basiertes Medizinlogistiksystem (Granted)

Date: 19 Sep 2023

German Patent File No - 20 2023 102 823.3

Developed a web application for tracking prescription drugs using Blockchain, enabling secure and transparent pharmaceutical supply chain management with improved traceability by 80% and significantly reduced instances of counterfeit drugs in deployments
