## Summary

---

Full-stack software engineer with startup experience building AI-powered systems and user-facing products. Experienced shipping production software end-to-end, integrating LLMs into real workflows, and scaling systems in fast-moving startup environments.

## Education

---

**University of Massachusetts**, Amherst, MA, United States

Sep 2024 – May 2026

Master of Science in Computer Science

GPA: 3.86/4.00

**University of Mumbai**, Mumbai, India

Aug 2019 – May 2023

Bachelor of Engineering in Computer Engineering

GPA: 3.87/4.00

## Professional Experience

---

**Software Developer Summer Intern** | Karpuragaurai Technologies, India

May 2025 – Aug 2025

Tech Stack: Python, Redis, REST APIs, AWS, Docker, Celery

- Implemented RAG backend using PostgreSQL and PGVector to index client knowledge bases for grounded LLM responses
- Deployed containerized backend services on AWS ECS behind an Application Load Balancer with autoscaling workers
- Added Redis-based response caching and asynchronous background processing to reduce end to end query latency by 30%

**Founding Full Stack Software Developer** | Lab Systems (I) Pvt. Ltd., India

May 2023 – Aug 2024

Tech Stack: NextJS, Python, C++, Flask, SQL/NoSQL, Cloudflare, Docker, Software Architecture, Solution Designing, AWS

- As a Founding Engineer, architected the software roadmap and core system architecture for an AI-driven forensics platform
- Built Python and C++ based backend services and integrated with MongoDB and Elasticsearch databases for production systems
- Designed and iterated on early Next.js product interfaces, working directly with stakeholders to turn ambiguous requirements into usable workflows.
- Engineered secure, containerized execution environments for agent runtimes using Docker to safely execute autonomous tasks
- Architected autonomous agents to automate evidence analysis, anomaly detection, and investigation workflows
- Led an engineering team and established Git-based workflows, code reviews, and release practices to maintain delivery velocity

**Full Stack Software Developer Intern** | Lab Systems (I) Pvt. Ltd., India

Aug 2022 – Apr 2023

Tech Stack: Python, Node.js, REST APIs, MongoDB, LevelDB, Docker, Linux, Web Security, Distributed Systems, System Design

- Developed a solution for cryptocurrency forensics applications, reducing manual analytical processing time by 70%
- Implemented unit tests and validation checks to ensure correctness and reliability of backend system changes over time
- Designed hybrid MongoDB–LevelDB storage patterns enabling fast lookups across 2 Billion transaction records
- Contributed to high profile case involving global clients with financial exposure exceeding \$20M in sensitive environments

## Skills

---

**Backend & APIs:** Python, Node.js, REST API design, PostgreSQL, MongoDB, Redis, background jobs, caching

**Frontend:** React, TypeScript, Next.js, Tailwind CSS

**AI & Automation:** LLM integration in production systems, RAG pipelines, embeddings, vector databases (PGVector)

**Cloud & Infrastructure:** AWS (ECS, EC2, ALB), Docker, Cloudflare, CI/CD pipelines

**Engineering Practices:** Full-stack system design, testing (PyTest, Mocha)

## Relevant Projects

---

**LLM-Router: Intelligent LLM Selection and Cost Optimization** | Tech: PyTorch, DistilBERT, CodeBERT [Project Link](#)

- Fine tuned DistilBERT and CodeBERT classifiers on real world prompt response data to dynamically route requests.
- Reduced inference costs by 70% by reducing reliance on expensive models like GPT-4o while maintaining high output quality

## Patent

---

**D Ein Blockchain-basiertes Medizinlogistiksystem (Granted)**

German Patent File No - 20 2023 102 823.3

Date: 19 Sep 2023

Developed a web application for tracking prescription drugs using Blockchain, enabling secure and transparent pharmaceutical supply chain management with improved traceability by 80% and significantly reduced instances of counterfeit drugs in deployments
