Education

University of Massachusetts , Amherst, MA, United States	Sep 2024 – May 2026
Master of Science in Computer Science	GPA: 3.87/4.00
University of Mumbai , Mumbai, India	Aug 2019 – May 2023
Bachelor of Engineering in Computer Engineering	GPA: 3.78/4.00

Professional Experience

Founding Full Stack Software Developer Lab Systems (I) Pvt. Ltd., India	Aug 2022 – Aug 2024
Tech Stack: Next.js, Python, C++, Flask, Node.js, REST APIs, MongoDB, Elasticsearch, LevelDB, Docker, Linux, Cloudflare, AWS, System Design	
- Delivered core modules across two forensic products: an AI-driven digital forensics platform for Government of India stakeholders and a cryptocurrency forensics platform for global clients. - Engineered Python search and analytics services over 1TB+ of forensic data using MongoDB and Elasticsearch. - Shipped 20+ REST APIs for evidence ingestion, analytics, user operations, case management, and forensic data access. - Designed hybrid MongoDB–LevelDB storage patterns enabling fast lookups across 2B+ cryptocurrency transaction records. - Created cryptocurrency investigation capabilities that reduced manual transaction analysis time by 70%. - Architected AI-driven agents for evidence analysis, anomaly detection, and investigation automation. - Deployed Dockerized services on Linux to improve release consistency, environment reproducibility, and cloud deployment reliability. - Led a team of 5 engineers, establishing Git workflows, code reviews, validation checks, and release standards to improve team delivery and service quality. - Contributed to sensitive forensic casework for global clients with financial exposure exceeding \$20M.	

Patent

D Ein Blockchain-basiertes Medizinlogistiksystem (Granted)	Date: 19 Sep 2023
German Patent File No - 20 2023 102 823.3	
Developed a web application for tracking prescription drugs using Blockchain, enabling secure and transparent pharmaceutical supply chain management with improved traceability by 80% and significantly reduced instances of counterfeit drugs in deployments	

Relevant Projects

LLM-Router: Intelligent LLM Selection and Cost Optimization Tech: PyTorch, DistilBERT, CodeBERT	Project Link
- Fine tuned DistilBERT and CodeBERT classifiers on real world prompt response data to dynamically route requests. - Reduced inference costs by 70% by reducing reliance on expensive models like GPT-4o while maintaining high output quality - Added guardrails and fallback paths within the LLM routing logic to ensure predictable responses under edge-case inputs	
LLM-Privacy-Attack: Privacy Vulnerability Research on LLM Agents Tech: PyTorch, Transformers, PEFT/LoRA, LangChain	Project Link
- Built a research framework to probe novel privacy attack vectors in autonomous LLM agents handling sensitive data - Fine tuned Gemma-3-1B using 4-bit quantized LoRA adapters, training under 1% of parameters for efficient deployment - Designed a modular agent suite (QA, conversational, tool-using, naive) to test data leakage across interaction patterns - Built an end-to-end inference and attack-simulation pipeline that detects and logs private data leakage from model outputs	

Skills

Cloud & Infrastructure: AWS (ECS, EC2, ALB), Docker, Cloudflare, CI/CD pipelines
Backend: Python, Node.js, REST API design, PostgreSQL, MongoDB, Redis, caching
AI & Automation: LLM integration in production systems, RAG pipelines, embeddings, vector databases (PGVector)
Frontend: React, TypeScript, Next.js, Tailwind CSS
Engineering Practices: Full-stack system design, testing (PyTest, Mocha)
