Education

University of Massachusetts, Amherst, MA, United States

Master of Science in Computer Science

Sep 2024 – May 2026

GPA: 3.86/4.00

University of Mumbai, Mumbai, India

Bachelor of Engineering in Computer Engineering

Aug 2019 – May 2023

GPA: 3.87/4.00

Professional Experience

Software Developer Summer Intern | Karpuragaurai Technologies, India

May 2025 – Aug 2025

Tech Stack: Python, Redis, REST APIs, AWS, Docker, Celery

- Built a multi tenant RAG backend for business customer support across chat and messaging with 5+ active tenants
- Implemented semantic retrieval using PostgreSQL and PGVector to index client knowledge bases for grounded LLM responses
- Deployed containerized backend services on AWS ECS behind an Application Load Balancer with autoscaling workers
- Added Redis-based response caching and asynchronous background processing to reduce end to end query latency by 30%

Founding Full Stack Software Developer | Lab Systems (I) Pvt. Ltd., India

May 2023 – Aug 2024

Tech Stack: NextJS, Python, C++, Flask, SQL/NoSQL, Cloudflare, Docker, Software Architecture, Solution Designing, AWS

- As a Founding Engineer, architected the software roadmap and core system architecture for an AI-driven forensics platform
- Built Python and C++ based backend services and integrated with MongoDB and Elasticsearch databases for production systems
- Built scalable enterprise-grade UIs in NextJs and 20+ REST APIs supporting large-scale data queries for enterprise clients at scale
- Containerized backend services on Linux with Docker and deployed to the cloud for production stability and release consistency
- Architected AI-driven forensic agents to automate evidence analysis, anomaly detection, and investigation workflows
- Led an engineering team and established Git-based workflows, code reviews, and release practices to maintain delivery velocity

Full Stack Software Developer Intern | Lab Systems (I) Pvt. Ltd., India

Aug 2022 – Apr 2023

Tech Stack: Python, Node.js, REST APIs, MongoDB, LevelDB, Docker, Linux, Web Security, Distributed Systems, System Design

- Developed a solution for cryptocurrency forensics applications, reducing manual analytical processing time by 70%
- Implemented unit tests and validation checks to ensure correctness and reliability of backend system changes over time
- Designed hybrid MongoDB–LevelDB storage patterns enabling fast lookups across 2 Billion transaction records
- Contributed to high profile case involving global clients with financial exposure exceeding \$20M in sensitive environments

Skills

Programming Languages: Python, SQL, NoSQL, GraphQL, JavaScript, Typescript, C/C++, CSS, SASS, Bash Script

Frameworks & Libraries: Pandas, Polars, PyTest, ReactJS/NextJS, ExpressJS, Mocha, TailwindCSS, GeoPandas

Development Tools: Cloudflare, AWS, Docker, MongoDB, Flask, Postman, Git/GitHub, Slack, ElasticSearch, Figma, REST APIs, Unit Testing, CI/CD, JIRA, Redis, Azure, Wireshark, Agile, Neo4j

Relevant Skills: Data Structures & Algorithms, OOP, Software Architecture, Data Mining, Data Analytics, Operating Systems, Software Engineering, Product Design, UI and UX Design, Project Management

Relevant Projects

LLM-Router: Intelligent LLM Selection and Cost Optimization | Tech: PyTorch, DistilBERT, CodeBERT [Project Link](#)

- Fine tuned DistilBERT and CodeBERT classifiers on real world prompt response data to dynamically route requests.
- Reduced inference costs by 70% by reducing reliance on expensive models like GPT-4o while maintaining high output quality
- Added guardrails and fallback paths within the LLM routing logic to ensure predictable responses under edge-case inputs.

Patent

D Ein Blockchain-basiertes Medizinlogistiksystem (Granted)

German Patent File No - 20 2023 102 823.3

Date: 19 Sep 2023

Developed a web application for tracking prescription drugs using Blockchain, enabling secure and transparent pharmaceutical supply chain management with improved traceability by 80% and significantly reduced instances of counterfeit drugs in deployments
